Art Unit: 1754

In claims 12,25, "is an organic compounds containing a group" is ungrammatical.

Claims 22-24 are objected to under 37 CFR 1.75 as being a substantial duplicate of claims 9-11, respectively. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1,13,26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1,13,26, "non-toxic precipitating agent" is indefinite as to what its metes and bounds are. Instant pg. 7 refers to the toxicity of bismuth and lanthanides as being low, ie. they are at least a little toxic, however instant claims 2,14,26 recite them as being "non-toxic" therefore it is unclear as to what "non-toxic precipitating agent" includes and excludes. It is also unclear as to what it is toxic to, ie. toxic with respect to humans or mice or rats or something else? Furthermore, the instantly claimed trivalent chromium would not appear to be "non-toxic" as is instantly claimed.

Art Unit: 1754

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13,17,40,43 are rejected under 35 U.S.C. 103(a) as being unpatentable over France 2607489 or SU 1323537.

FR '489 and SU '537 each suggest the instantly claimed process of adding what appears to be a nontoxic precipitating agent, eg. NaOH and calcium hydroxide, respectively, to a hexavalent containing aqueous solution from a chromium plating process at about room temperature to form a precipitate which is then recovered. See the abstract of each.

Claims 1-12,36,39,42,26-35,37,38,40,41,44 appear allowable over the cited prior art of record none of which teaches or suggests the instantly claimed combination of process steps.

Claims 2-12,14-16,18-25,27-39,41,42,44 are objected to.
